STREAMER & BROADCAST PRODUCER CHECKLIST

CC Zip Captions

Pre-Stream Live Captioning Verification Checklist

5-minute pre-flight check before going live on Twitch, YouTube, cable TV, or webcasts.

SIGNAL & WORKFLOW CHAIN

1. Isolated Voice Bus --> 2. Dialect & Language --> 3. OBS / vMix / Twitch --> 4. Export VOD .SRT

5-MINUTE PRE-FLIGHT CHECKLIST

- [ ] **Isolate the Voice Audio Input:**
  Confirm Zip Captions is listening only to your microphone or commentary bus, not desktop game audio or background music tracks.
- [ ] **Check Dialect & Language Settings:**
  Verify the correct language and regional dialect (for example, EN-CA, EN-US, EN-GB, or FR-CA) are selected in Zip Captions.
- [ ] **Verify OBS / vMix / Twitch Connection:**
  Speak a test sentence and confirm live text updates inside your OBS caption preview, vMix Title overlay, or Twitch chat.
- [ ] **Check Safe-Area Positioning:**
  Ensure on-screen open captions do not cover lower-third graphics, scoreboards, or webcam frames.
- [ ] **Enable Transcript Saving:**
  Keep the Zip Captions browser tab open until the stream ends so you can export your .SRT or .VTT file for the VOD archive.

ZERO CPU OVERHEAD

Zip Captions runs lightly inside your browser and sends pure text data over WebSockets or HTTP, keeping your GPU encoder free for high-framerate video.
