Zip Solutions Launches Free Real-Time Translation in Zip Captions Powered by Chrome On-Device AI

New update eliminates paywalls and cloud privacy concerns for classrooms, live events, and everyday accessibility.

MONTREAL, QC (October 2026) - Zip Solutions today announced the launch of real-time live caption translation inside Zip Captions, its browser-based live captioning platform. By leveraging Google Chrome's built-in On-Device AI models, Zip Captions now allows users to translate live captions into multiple languages instantaneously at zero cost.

While real-time translation has long been one of the most requested accessibility features in education and live production, high cloud-computing costs have historically forced software providers to lock translation behind expensive enterprise subscriptions. Zip Captions bypasses this barrier by running the translation models locally within the user's Chrome browser.

"True accessibility means removing both communication barriers and financial barriers," said Chris Webb, CEO and Co-Founder of Zip Solutions. "By harnessing Chrome's On-Device AI, we can give teachers, students, and organizations unlimited real-time translation without charging them a dime, while keeping their data private and right on their own device."

"We're building equity for our community, not for shareholders," said James Petersen, CTO and Co-Founder of Zip Solutions.

Key Highlights of the Zip Captions Translation Update

- **100% Free Access:** No subscription tiers, credit cards, or monthly minute limits.
- **Local On-Device Translation:** Powered by Chrome's native AI capabilities, ensuring ultra-low latency and high data privacy for sensitive educational and professional environments.
- **Seamless Browser Experience:** Works directly inside Google Chrome with a one-click language download for immediate use.
- **Classroom and Event Ready:** Supports multilingual classrooms, English Language Learners (ELL), community venues, and conferences alongside both standard browser speech recognition and optional Azure AI captioning.

The real-time translation feature is rolling out now and is immediately available to all Zip Captions users worldwide. To experience live translated captions or learn more about Zip Captions, visit zipcaptions.app or explore the organization's full suite of accessibility tools at zipsolutions.org.

About Zip Solutions

Based near Montreal, Quebec, Zip Solutions ("The Home of Accessibility") creates intuitive, accessible, and privacy-focused web applications and browser extensions designed to empower educators, students, and communicators worldwide. Guided by an advisory board of certified educators of the deaf and community advocates, Zip Solutions develops open, barrier-free tools including Zip Captions, Easy Speak AAC, EquiBrowse, and broadcast integration bridges for schools, workplaces, houses of worship, and live events worldwide.
